

Week 2 task process

Translating 3 digital photograph of dogs on my phone into:

- Pixels
- Colour palette
- Photo description
- Drawing
- Black and white
- Cmyk files for printing (through indesign)
- Sound (remake of what it might sound like: using found audio of online)
- Negative colour?
- Printed
- Html (uploading it onto google drive and copying its address)
- Painted
- Dotted
- Google with the pics and see what comes up|
- Traced with one line
- Projected onto a wall then photographed again
- Memories (stories of how I met the dogs and took the picture)
- Showing my mum the photo for 3 seconds and tell her to describe it with memory with text and then draw it
- Telling my grandma to draw the picture
- Facetime a cat and show it the picture (process recorded with video)

Dog's Vision Converter

Home / Dog's Vision Converter

For many years people believed that dogs have the ability to see only black and white. However, some of the latest scientific studies have shown us the exact opposite. Dogs can see the world in colours, but their eyesight is limited.

Here, at Woof Me, we built a small tool to convert your pictures into how they appear on your dog's eyes.

Optimal Distance

Find the optimal distance from the screen for precise comparison of visual acuity:

Move just as far from the screen until the raster below is perceived as a homogenous grey field.

What Colours The Dogs are Able to See

Dogs have dichromatic vision which means **they can only see two shades (blue and yellow)**.

Humans are able to see variations of red, green and blue but the dogs' cells that read red and green are identical making these two colours indistinct.

The image below shows us exactly what shades a dog can distinguish. Perhaps now it makes more sense why your dog prefers a blue or a yellow toy than a red one.

A red or green toy will probably look as light brown or grey in dog's eyes and in order to find it faster, he might count more on the sense of smell instead of of vision.
